David –
Thanks for the update. Yes, I'd like to see the RACR.

Subject: Sediment at Alameda

Hi Karen,

I got an update on the status and use of the sediment dredged from Clipper Cove at Treasure Island. I was correct that three of 20 piles tested above the limit for lead and will be shipped off site. The rest will be used in Landfill Unit 1. I was incorrect that they will be used at the base of the landfill. They landfill is already there. The sediment will be used as the BASE layer of the cover. This layer will be three feet deep. There should be a RACR for Clipper Cove sent out for review in the next week or so. Would you like to review it? Additionally, I should get an update at the next BCT Meeting. I'm not sure if it's next week or the week after.

Let me know if you have any additional questions.
